Welcome :: Chromatography Online

Chromatography is a laboratory technique for the separation of a mixture. The mixture is dissolved in a fluid called the mobile phase, which carries it through a structure holding another material called the stationary phase. The various constituents of the mixture travel at different speeds, causing them to separate.

Paper chromatography is an analytical method used to separate colored chemicals or substances. It is primarily used as a teaching tool, having been replaced by other chromatography methods, such as thin-layer chromatography. A paper chromatography variant, two-dimensional chromatography involves using two solvents and rotating the paper 90° in between.

We were going to call this tutorial "Reverse Phase HPLC for Proteomics" but we decided to exercise some restraint. We decided to write this tutorial because reverse phase chromatography is the most common form of chromatography used in LC/MS applications.

Chromatography is the science of separation which uses a diverse group of methods to separate closely related components of complex mixtures. During gas chromatographic separation, the sample is transported via an inert gas called the mobile phase.

This chapter focuses on high performance liquid chromatography (HPLC), which is an instrumental analytical method that gained increased acceptance mainly because it met two basic factors: (1) the need for a wide range of rapid analyses for nutrients, and (2) the need for methods that can be easily automated.

The Journal of Chromatography A provides a forum for the publication of original research and critical reviews on all aspects of fundamental and applied separation science. The scope of the journal includes chromatography and related techniques, electromigration techniques (e.g. electrophoresis, electrochromatography), hyphenated and other multi-dimensional techniques, sample preparation, and ...
