

comparative physiology natural animal pdf

The Journal of Comparative Physiology A presents original articles and short reviews that add to understanding of mechanisms of physiology, at the organismic, cellular or molecular levels of organization.

Journal of Comparative Physiology A - springer.com

Ethology is the scientific and objective study of animal behaviour, usually with a focus on behaviour under natural conditions, and viewing behaviour as an evolutionarily adaptive trait. Behaviourism is a term that also describes the scientific and objective study of animal behaviour, usually referring to measured responses to stimuli or trained behavioural responses in a laboratory context ...

Fish physiology is the scientific study of how the component parts of fish function together in the living fish. It can be contrasted with fish anatomy, which is the study of the form or morphology of fishes. In practice, fish anatomy and physiology complement each other, the former dealing with the structure of a fish, its organs or component parts and how they are put together, such as might ...

Tonic immobility is a natural state of paralysis that animals enter, often called animal hypnosis. Its function is not certain. It may be related to mating in certain animals like sharks. It may also be a way of avoiding or deterring predators (playing dead is called thanatosis). Tonic immobility has also been used for the paralysis that often immobilizes animals, such as rodents or birds, when ...
