Computer-aided design (CAD) is the use of computer systems (or workstations) to aid in the creation, modification, analysis, or optimization of a design. CAD software is used to increase the productivity of the designer, improve the quality of design, improve communications through documentation, and to create a database for manufacturing. CAD output is often in the form of electronic files ...

Engineering seeks to create new processes, products, methods, materials, or systems that impact and are beneficial to our society. To enable its graduates to lead the advancement of technology, the Case School of Engineering offers fourteen degree programs at the undergraduate level (twelve engineering degrees, plus the BS in computer science and the BS in data science and analytics).

Civil Engineering Design software includes programs with functionality specific to the civil engineering industry, such as railway modeling, road and highway design, and mapping tools. Some of these products are stand-alone tools with extensive CAD technology tailored towards civil engineering, while others run atop other softwares to optimize them for civil engineering purposes.
