The microstructure of a polymer (sometimes called configuration) relates to the physical arrangement of monomer residues along the backbone of the chain. These are the elements of polymer structure that require the breaking of a covalent bond in order to change.

Learn how to make plastic from synthetic monomer and polymer resins.

### **How Plastics Are Made**

Carries water: Studies on water adsorption and transport on oxidized 2 D carbon materials have attracted increasing interest owing to their applications in various research fields such as sensing, energy conversion, and membrane separation. Herein, the recent progress on water adsorption and transport on oxidized 2 D carbon materials is reviewed, together with its application in proton ...
