

motor control and learning pdf

Introduction. According to Roller et al (2012) in Contemporary Issues and Theories of Motor Control, Motor Learning, and Neuroplasticity, the production and control of human movement is a process that varies from a simple reflex loop to a complex network of neural patterns that communicate throughout the Central Nervous System (CNS) and Peripheral Nervous System (PNS).

theoretical models of motor control, state estimation and motor learning. We examine the assumptions – many of which often go unchallenged – underlying these models and discuss common pitfalls in their application. Finally, we discuss important unanswered questions and consider possible future directions for research.
