Let k be a positive integer. The arithmetical function is defined by for all n $\sum_{d|n} d^{-k}$ is called Dedekind's function. and for all $n > 1$ $\sum_{d|n} d^{-k}$ is called Klee's function. Let k be a positive integer. The arithmetical function is defined by if n is a otherwise.

What is a function? A function is a machine that does something to one number to turn it into another. Starting with a set of input numbers, the function will create a second set of output numbers. Functions are often written as $f(x)$ or $g(x)$, but you can use any letters for the function name and the variable.

Revision Topic 6: Mathematical models

From the Paste Function dialog box, browse through the functions by clicking in the Function category menu on the left and select from the Function name choices on the right. As each function name is highlighted a description and example of use is provided below the two boxes.
